

PHPUnit e metodologia TDD

Rimorsoft Online (Italo Morales)

https://www.youtube.com/watch?v=1kCy_7Bu3Mc&list=PLhCiuvlix-rR3Pk8uaPN3duC1JHaibSrN

Resumo do curso feito por Roberto Pinheiro

Aula 01 - Introdução

PHPUnit é um framework para provar profissionalmente código em PHP. Nesta série entenderemos como funciona e também conheceremos a metodologia TDD, que significa desenvolvimento guiado por provas.

TDD (Test Drive - Development ou desenvolvimento guiado por provas) é uma metodologia de desenvolvimento.

Cada linguagem de programação tem sua própria ferramenta de provas.

PHPUnit é uma ferramenta (framework) de provas PHP.

Aula 02 - Fluxo de trabalho sem PHPUnit

Crie a subpasta 1 (exercício 1)

index.php

```
<?php  
  
class Slug  
{  
    public function render($original)  
    {  
        $slug = str_replace(" ", "-", $original);  
        return strtolower($slug);  
    }  
}  
  
$slug = new Slug;  
  
echo $slug->render("Cursos de Laravel");
```

Fazendo uma melhoria:

index.php

```
{
    protected $original;

    public function __construct($original)
    {
        $this->original = $original;
    }

    public function render()
    {
        $slug = str_replace(" ", "-", $this->original);
        return strtolower($slug);
    }
}

$slug = new Slug("Cursos de Laravel");

echo $slug->render();
```

Fazendo uma nova melhoria:

index.php

```
require('Slug.php');  
  
$slug = new Slug("Cursos de Laravel");  
  
echo $slug->render();
```

Slug.php

```
<?php  
  
class Slug  
{  
    protected $original;  
  
    public function __construct($original)  
    {  
        $this->original = $original;  
    }  
  
    public function render()  
    {  
        $slug = str_replace(" ", "-", $this->original);  
        return strtolower($slug);  
    }  
}
```

Aula 03 - Primeira prova com PHPUnit

Na aula anterior ilustramos o processo de desenvolvimento sem provas, aqui buscamos recriar esse exercício usando PHPUnit.

Dentro da pasta tests, crie a subpasta 2 (exercício 2).

Para instalar o PHPUnit, dentro da subpasta 2, nessa subpasta entre com o seguinte comando:

```
composer require --dev phpunit/phpunit ^8
```

composer.json

```
{
  "require-dev": {
    "phpunit/phpunit": "8"
  }
}
```

Dentro da subpasta 2, crie o arquivo SlugTest.php

SlugTest.php

```
<?php

use PHPUnit\Framework\TestCase;

class SlugTest extends TestCase
{
    public function test_render()
    {
        require('Slug.php');

        $slug = new Slug("Cursos de Laravel");

        $expected = "cursos-de-laravel";

        $this->assertEquals($slug->render(), $expected);
    }
}
```

E dentro da subpasta 2, também crie o arquivo Slug.php:

Slug.php

```
<?php

class Slug
{
    protected $original;

    public function __construct($original)
    {
        $this->original = $original;
    }

    public function render()
    {
        $slug = str_replace(" ", "-", $this->original);
        return strtolower($slug);
    }
}
```

assertion = asserção ou afirmação

Entre com o comando:

`vendor\bin\phpunit SlugTest.php --color`

```
C:\laragon\www\tests\2
λ vendor\bin\phpunit SlugTest.php --color
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

.                                                                    1 / 1 (100%)

Time: 85 ms, Memory: 4.00 MB

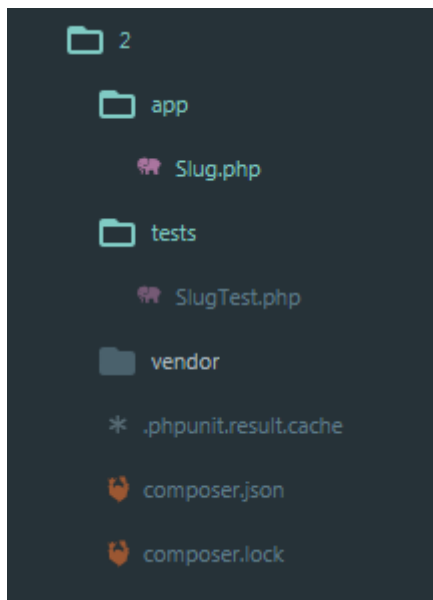

OK (1 test, 1 assertion)
C:\laragon\www\tests\2
λ |
```

Para uma melhor organização, crie dentro da subpasta 2, duas outras subpastas:

- app
- tests

Mova o arquivo Slug.php para a subpasta app.

Mova o arquivo SlugTest.php para a subpasta tests.

Altere o arquivo SlugTest.php para:

SlugTest.php

```
<?php

use PHPUnit\Framework\TestCase;

class SlugTest extends TestCase
{
    public function test_render()
    {
        require('app\Slug.php');

        $slug = new Slug("Cursos de Laravel");

        $expected = "cursos-de-laravel";

        $this->assertEquals($slug->render(), $expected);
    }
}
```

Entre com o comando

`vendor\bin\phpunit tests\SlugTest.php --color`

```
C:\laragon\www\tests\2
λ vendor\bin\phpunit tests\SlugTest.php --color
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

.                                                                    1 / 1 (100%)

Time: 85 ms, Memory: 4.00 MB

OK (1 test, 1 assertion)

C:\laragon\www\tests\2
λ |
```

O resultado deve ser o mesmo.

Aula 04 - Estrutura de pastas

Nesta aula instalaremos o Laravel para observar sua estrutura, a ideia é criar exercícios muito próximos a estrutura estudada anteriormente para que quando trabalharmos com o Laravel isso se torne bastante familiar e possamos entender melhor cada conceito.

Na subpasta 2, suba um nível com:

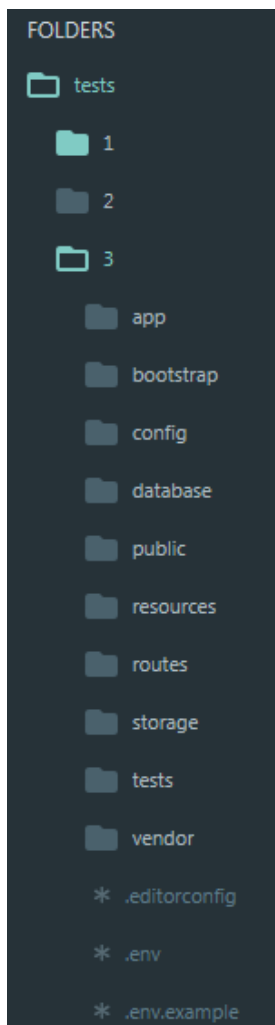

`cd..`

Agora entre com o comando:

`laravel new 3`

```
C:\laragon\www\tests  
λ laravel new 3
```

Será criada a subpasta 3 com os arquivos do Laravel:

Aula 05 - Estrutura de provas como no Laravel

Criando o exercício 2 com a estrutura do Laravel

Crie a subpasta 4 (exercício 4). Dentro dela instalar o PHPUnit:

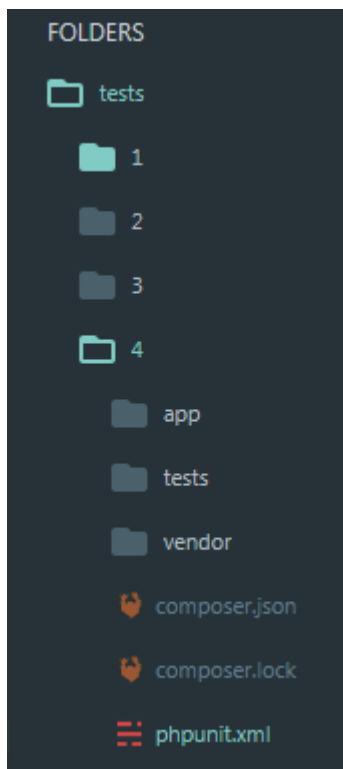

```
composer require --dev phpunit/phpunit ^8
```

```
C:\laragon\www\tests\4  
λ composer require --dev phpunit/phpunit ^8
```

Dentro da subpasta 4, crie as subpastas:

- app
- tests

E crie o arquivo phpunit.xml

phpunit.xml

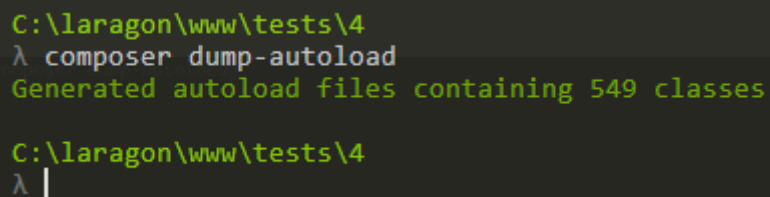

```
<?xml version="1.0" encoding="UTF-8"?>
<phpunit bootstrap="vendor/autoload.php"
    colors="true">
    <testsuites>
        <testsuite name="Application Test Suite">
            <directory suffix="Test.php">./tests</directory>
        </testsuite>
    </testsuites>
</phpunit>
```

composer.json

```
{
    "require-dev": {
        "phpunit/phpunit": "8"
    },
    "autoload": {
        "psr-4": {
            "App\\": "app"
        }
    }
}
```

Entre com o comando:

composer dump-autoload

```
C:\laragon\www\tests\4
λ composer dump-autoload
Generated autoload files containing 549 classes

C:\laragon\www\tests\4
λ |
```

Dentro da subpasta tests, crie o arquivo SlugTest.php:

SlugTest.php

```
<?php

use PHPUnit\Framework\TestCase;
use App\Slug;

class SlugTest extends TestCase
{
    public function test_render()
    {
        $slug = new Slug("Cursos de Laravel");
        $this->assertEquals($slug->render(), "cursos-de-laravel");
    }
}
```

Dentro da subpasta tests crie o arquivo Slug.php:

Slug.php

```
<?php

namespace App;

class Slug
{
    protected $original;

    public function __construct($original)
    {
        $this->original = $original;
    }

    public function render()
    {
        $slug = str_replace(" ", "-", $this->original);
        return strtolower($slug);
    }
}
```

Entre com o comando:

vendor\bin\phpunit

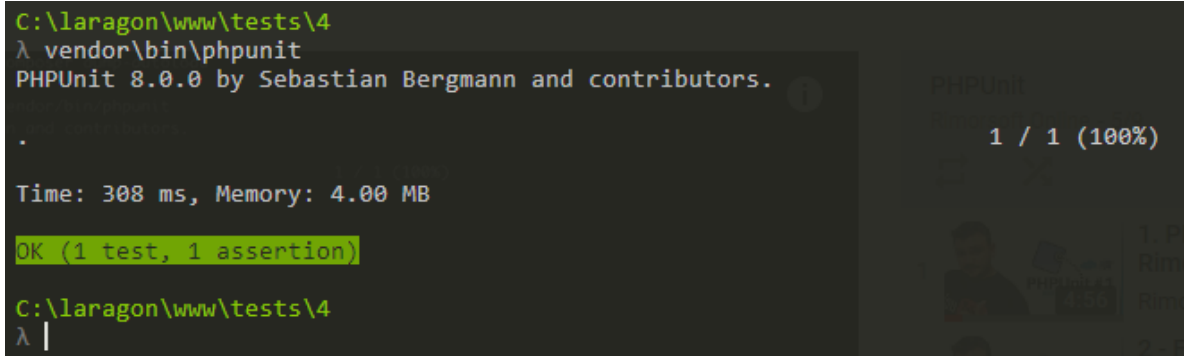

```
C:\laragon\www\tests\4
λ vendor\bin\phpunit
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

.

Time: 308 ms, Memory: 4.00 MB

OK (1 test, 1 assertion)

C:\laragon\www\tests\4
λ |
```

Criando um novo teste

SlugTest.php

```
<?php
```

```
use PHPUnit\Framework\TestCase;
use App\Slug;
```

```
class SlugTest extends TestCase
```

```
{
    public function test_render()
    {
        $slug = new Slug("Cursos de Laravel");
        $this->assertEquals($slug->render(), "cursos-de-laravel");
    }
}
```

```
public function test_render_without_spaces()
{
    $slug = new Slug("  Cursos de Laravel  ");
    $this->assertEquals($slug->render(), "cursos-de-laravel");
}
```

```
}
```

Testando:

```
C:\laragon\www\tests\4
λ vendor\bin\phpunit
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

SlugTest.php
.F                                                                    2 / 2 (100%)

Time: 107 ms, Memory: 4.00 MB

There was 1 failure:
1) SlugTest::test_render_without_spaces
Failed asserting that two strings are equal.
--- Expected
+++ Actual
@@ @@
-'---cursos-de-laravel---'
+'cursos-de-laravel'

C:\laragon\www\tests\4\tests\SlugTest.php:17 >render(), "cursos-de-laravel");

FAILURES!
Tests: 2, Assertions: 2, Failures: 1.

C:\laragon\www\tests\4
λ |
```

Corrigindo:

Slug.php

```
<?php

namespace App;

class Slug
{
    protected $original;

    public function __construct($original)
    {
        $this->original = $original;
    }

    public function render()
    {
        $slug = str_replace(" ", "-", trim($this->original));
        return strtolower($slug);
    }
}
```

Testando:

```
C:\laragon\www\tests\4
λ vendor\bin\phpunit
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

..
Time: 176 ms, Memory: 4.00 MB
OK (2 tests, 2 assertions)

C:\laragon\www\tests\4
λ |
```

Cada método é uma prova e cada método tem uma afirmação (assertion).

Uma correção de código

Slug.php

```
<?php

namespace App;

class Slug
{
    protected $original;

    public function __construct($original)
    {
        $this->original = trim($original);
    }

    public function render()
    {
        $slug = str_replace(" ", "-", $this->original);
        return strtolower($slug);
    }
}
```

```
C:\laragon\www\tests\4
λ vendor\bin\phpunit
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

..
Time: 96 ms, Memory: 4.00 MB
OK (2 tests, 2 assertions)

C:\laragon\www\tests\4
λ |
```

Outra correção de código (melhora)

Slug.php

```
<?php

namespace App;

class Slug
{
    protected $original;

    public function __construct($original)
    {
        $this->original = $original;
    }

    public function getOriginal()
    {
        return trim($this->original);
    }

    public function render()
    {
        $slug = str_replace(" ", "-", $this->getOriginal());
        return strtolower($slug);
    }
}
```

```
C:\laragon\www\tests\4
λ vendor\bin\phpunit
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

..                                                                2 / 2 (100%)

Time: 97 ms, Memory: 4.00 MB render()
OK (2 tests, 2 assertions) str_replace(" ", "-", $this->getOriginal());
C:\laragon\www\tests\4 m strtolower($slug);
λ |
```

Aula 06 - Assertões ou afirmações em PHPUnit

Crie a subpasta 5 (exercício 5) e dentro dela instale o PHPUnit.

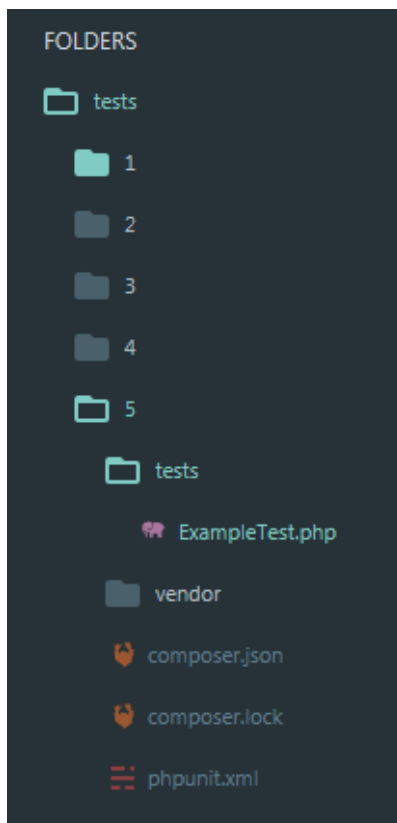

```
composer require --dev phpunit/phpunit ^8
```

Dentro da subpasta 5 crie a subpasta tests. E dentro dela crie o arquivo ExampleTest.php

Crie o arquivo phpunit.xml

phpunit.xml

```
<?xml version="1.0" encoding="UTF-8"?>
<phpunit bootstrap="vendor/autoload.php"
  colors="true">
  <testsuites>
    <testsuite name="Application Test Suite">
      <directory suffix="Test.php">./tests</directory>
    </testsuite>
  </testsuites>
</phpunit>
```

ExampleTest.php

```
<?php

use PHPUnit\Framework\TestCase;

class ExampleTest extends TestCase
{
    public function testTrue()
    {
        $this->assertTrue(true);
    }
}
```

A terminal window showing the execution of a PHPUnit test. The command 'vendor/bin/phpunit' is run from the directory 'C:\laragon\www\tests\5'. The output shows 'PHPUnit 8.0.0 by Sebastian Bergmann and contributors.' followed by a single dot '.' representing a passed test. Below this, it says 'Time: 94 ms, Memory: 4.00 MB' and 'OK (1 test, 1 assertion)' in green. The prompt 'λ' is visible at the bottom.

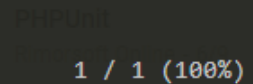

```
C:\laragon\www\tests\5
λ vendor\bin\phpunit
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

.

Time: 94 ms, Memory: 4.00 MB

OK (1 test, 1 assertion)

C:\laragon\www\tests\5
λ |
```

A visual progress bar for PHPUnit. It shows 'PHPUnit' at the top, followed by '1 / 1 (100%)' indicating that all tests passed.

```
PHPUnit
1 / 1 (100%)
```

ExampleTest.php

```
<?php

use PHPUnit\Framework\TestCase;

class ExampleTest extends TestCase
{
    public function testTrue()
    {
        $this->assertTrue(true);
    }

    public function testFalse()
    {
        $var1 = false;
        $this->assertFalse($var1);
    }
}
```

```
C:\laragon\www\tests\5
λ vendor\bin\phpunit
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

..
Time: 99 ms, Memory: 4.00 MB
OK (2 tests, 2 assertions)

C:\laragon\www\tests\5
λ |
```

ExampleTest.php

```
<?php
use PHPUnit\Framework\TestCase;

class ExampleTest extends TestCase
{
    public function testTrue()
    {
        $this->assertTrue(true);
    }

    public function testFalse()
    {
        $var1 = false;
        $this->assertFalse($var1);
    }

    public function testEquals()
    {
        $soma = 5 + 5;
        $this->assertEquals($soma, "10");
    }
}
```

```
C:\laragon\www\tests\5
λ vendor\bin\phpunit
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

...
Time: 101 ms, Memory: 4.00 MB
OK (3 tests, 3 assertions)

C:\laragon\www\tests\5
λ |
```

ExampleTest.php

```
<?php

use PHPUnit\Framework\TestCase;

class ExampleTest extends TestCase
{
    public function testTrue()
    {
        $this->assertTrue(true);
    }

    public function testFalse()
    {
        $var1 = false;
        $this->assertFalse($var1);
    }

    public function testEquals()
    {
        $soma = 5 + 5;
        $this->assertEquals($soma, "10");
    }

    public function testSame()
    {
        $soma = 5 + 5;
        $this->assertSame($soma, 10);
    }
}
```

```
C:\laragon\www\tests\5
λ vendor\bin\phpunit ar1 = false;
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

....                                                                4 / 4 (100%)
Time: 109 ms, Memory: 4.00 MB
OK (4 tests, 4 assertions)
C:\laragon\www\tests\5
λ |
```

ExampleTest.php

```
<?php

Aula 07 - Ciclo do TDD

Vermelho, Verde, Refactor

Primeiro se cria a prova sem o código => vermelho

Depois se cria o código => verde

Depois se faz as melhorias no código => refactor

Crie a subpasta 6 (exercício 6) e dentro dela instale o PHPUnit.

`composer require --dev phpunit/phpunit ^8`

```
C:\laragon\www\tests\6
λ composer require --dev phpunit/phpunit ^8
```

Dentro da subpasta 6 crie as seguintes subpastas:

- app
- tests

Crie o arquivo phpunit.xml

phpunit.xml

```
<?xml version="1.0" encoding="UTF-8"?>
<phpunit bootstrap="vendor/autoload.php"
    colors="true">
    <testsuites>
        <testsuite name="Application Test Suite">
            <directory suffix="Test.php">./tests</directory>
        </testsuite>
    </testsuites>
</phpunit>
```

Altere o arquivo composer.json para:

composer.json

```
{
  "require-dev": {
    "phpunit/phpunit": "8"
  },
  "autoload": {
    "psr-4": {
      "App\\": "app"
    }
  }
}
```

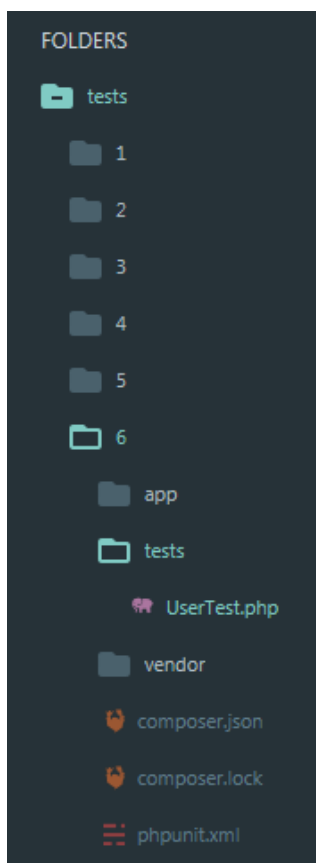

Entre com o comando:

composer dump-autoload

```
C:\laragon\www\tests\6
λ composer dump-autoload
Generated autoload files containing 549 classes

C:\laragon\www\tests\6
λ |
```

Dentro da subpasta tests, crie o arquivo (classe) UserTest.php

UserTest.php

```
<?php  
  
use PHPUnit\Framework\TestCase;  
  
class UserTest extends TestCase  
{  
  
}
```

Aula 08 - TDD - Test de setName e getName

Etapa Red - Criando a prova sem o código

UserTest.php

```
<?php

use PHPUnit\Framework\TestCase;
use App\User;

class UserTest extends TestCase
{
    public function test_i_can_register_name()
    {
        $user = new User;
        $user->setName("Italo");

        $this->assertEquals($user->getName(), "Italo");
    }
}
```

```
C:\laragon\www\tests\6
λ vendor\bin\phpunit
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.
```

E

Time: 1.38 seconds, Memory: 4.00 MB

There was 1 error:

1) UserTest::test_i_can_register_name
Error: Class 'App\User' not found

C:\laragon\www\tests\6\tests\UserTest.php:10

```

PHPUnit

1 / 1 (100%)

Etapa Verde - Criando o código

Na subpasta app crie o arquivo (classe) User.php

User.php

```
<?php

namespace App;

class User
{
    protected $name;

    public function setName($name)
    {
        $this->name = $name;
    }

    public function getName()
    {
        return $this->name;
    }
}
```

```
C:\laragon\www\tests\6
λ vendor\bin\phpunit
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

.                                                                    1 / 1 (100%)

Time: 168 ms, Memory: 4.00 MB

OK (1 test, 1 assertion)

C:\laragon\www\tests\6
λ |
```

Aula 09 - TDD - Test setName e getLastName

Etapa Red - Criando a prova sem o código

UserTest.php

```
<?php

use PHPUnit\Framework\TestCase;
use App\User;

class UserTest extends TestCase
{
    public function test_i_can_register_name()
    {
        $user = new User;
        $user->setName("Italo");

        $this->assertEquals($user->getName(), "Italo");
    }

    public function test_i_can_register_lastname()
    {
        $user = new User;
        $user->setLastName("Morales");

        $this->assertEquals($user->getLastName(), "Morales");
    }
}
```

```
C:\laragon\www\tests\6
λ vendor\bin\phpunit
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

.E                                                                    2 / 2 (100%)

Time: 122 ms, Memory: 4.00 MB

There was 1 error:

1) UserTest::test_i_can_register_lastname
Error: Call to undefined method App\User::setLastName()

C:\laragon\www\tests\6\tests\UserTest.php:19

ERRORS!
Tests: 2, Assertions: 1, Errors: 1.

C:\laragon\www\tests\6
λ |
```

Etapa Verde - Criando o código

User.php

```
<?php

namespace App;

class User
{
    protected $name;
    protected $lastname;

    public function setName($name)
    {
        $this->name = $name;
    }

    public function getName()
    {
        return $this->name;
    }

    public function setLastName($lastname)
    {
        $this->lastname = $lastname;
    }

    public function getLastName()
    {
        return $this->lastname;
    }
}
```

```
C:\laragon\www\tests\6
λ vendor\bin\phpunit
PHPUnit 8.0.0 by Sebastian Bergmann and contributors.

..                                                    2 / 2 (100%)
